

We are writing to you as our representative to share our concerns regarding the Covid injections.

No doubt you are aware there were over 50,000 excess deaths recorded last year, and from the data so far this year, it would appear there has been a dramatic increase - almost 3,000 extra deaths per week. **Yes, tragically people are dying in droves.**

From a personal perspective, we have never, ever known of so many of our family, friends, and acquaintances who have either died or had a severe illness. We started a list some 18 months ago, which now includes 38 people. It increases virtually EVERY month. The injuries include strokes, blood clots, heart attacks or heart irregularities, aneurysms and cancer. **Tragically a total of 20 of the 38 have died, 13 suddenly.** We are sure you can imagine our fears and concerns.

Admittedly, we cannot be certain that it's all due to the so-called "covid vaccine", but we have NEVER known in our lives of so many people in our circle who have died or received serious health issues in such a short period of time. Yes, we hear the politicians with excuses of the lack of statins, (However, there are huge excess deaths in the 5-14 year olds – I am not aware of this age group being large consumers of statins?) hospitals overrun, staff shortages and strikes etc, etc. However, as it was recently pointed out by the Minister of Health, these excess deaths are occurring all over Europe. If all these other countries are now experiencing excess deaths, then surely there must be a common factor that needs to be investigated?

We are amazed that so many people have their heads buried in the sand. We are aware that some MPs have been raising questions in the House, in particular, Mr Andrew Bridgen, whose bravery to seek answers was rewarded with suspension (or was it because he quoted the Israeli Scientist?) There now appears to be a deafening silence and the matter of excess deaths is hardly spoken about as if it was of no concern.

We would like to know your opinions on the safety of these "vaccines" and explain why there has been a failure to launch an inquiry into these alarmingly and consistently high excess deaths.

Furthermore, can you explain why the MHRA is not investigating the excess deaths along with the 1.5 million adverse reactions as shown on their Yellow card data?

We look forward to your reply.

Kind Regards
